

Bassam Jawish

Senior Mobile Developer | Damascus, Syria

jawishbassam@gmail.com | +963953524651 | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

SUMMARY

Senior Mobile Developer with 4+ years of experience designing, building, and shipping high-performance, cross-platform applications for iOS and Android, including 5+ production apps published to the App Store and Google Play. Specialized in fintech and large-scale consumer products, with deep expertise in Clean Architecture, MVVM/MVC, BLoC/Cubit, and GetX state management. Proven record of delivering secure, scalable apps — backed by automated CI/CD pipelines, RESTful API integration, and rigorous unit and widget testing. Collaborative contributor in Agile/Scrum teams, focused on performance optimization and clean, maintainable code.

WORK EXPERIENCE

FikraTech

Mobile Developer

Apr 2025 – Jun 2026

Dubai, United Arab Emirates

Developed and maintained secure, large-scale fintech applications — **Hawelli**, **Dinarak**, and **Sahab** — spanning digital wallets, remittances, payments, and card management.

- Architected **Hawelli** on Clean Architecture across 40+ feature modules and 110+ screens, delivering QR/NFC payments, IBAN transfers, multi-wallet management, and KYC document scanning.
- Engineered advanced mobile security — RSA-2048 request signing, AES-GCM encrypted storage, certificate pinning, biometric and OTP authentication, and root/jailbreak detection — with token-refresh interceptors and secure session management.
- Built **Dinarak** wallet operations (money transfers, bill payments, ATM withdrawals, QR merchant payments) by integrating eFAWATEERCOM and banking APIs, on reusable BLoC/Cubit infrastructure with generic pagination and error handling.
- Delivered **Sahab** exchange-rate dashboards, international transfers, and transaction tracking using live currency APIs and map-based branch/ATM discovery.
- Managed 8 application flavors with isolated Firebase configs and CI/CD pipelines; integrated Crashlytics, Shorebird OTA updates, and Dio caching with ObjectBox, improving app performance by ~30%.

Rand LLC

Mobile Engineer

Jun 2024 – Apr 2025

Damascus, Syria

Built cross-platform streaming and lifestyle applications — **Livo**, **DoReMi**, and **Emaniyat** — using Clean Architecture, BLoC, and modular feature design.

- Engineered **Livo**, a streaming app (movies, series, live TV, sports) with an advanced HLS video player supporting fullscreen, picture-in-picture, subtitles, and adaptive quality; built phone-OTP auth with token refresh, and GoRouter + GetIt dependency injection.
- Built **DoReMi**, a music, podcast, and radio app with background audio (just_audio / audio_service), offline-first SQLite downloads, deep linking, FCM routing, and a subscription/monetization system — doubling the user base within 6 months.
- Developed **Emaniyat**, an Islamic lifestyle app (Quran reader, prayer times, Qibla compass, digital library) featuring a 604-page Mushaf reader, multi-reciter ayah-level audio streaming, location-based notifications, and subscription flows.
- Converted native Android code to Flutter — enabling cross-platform support and reducing development time by ~50% and introduced monetization features that increased app revenue by ~70%.

Doodles Agency

Mobile Application Developer

May 2023 – May 2024

Damascus, Syria

- Built **Taverna**, a Flutter on-demand marketplace connecting users with nearby restaurants and supermarkets for menu browsing, ordering, and real-time delivery tracking — reaching 5,000+ users and lifting vendor engagement by 30%.
- Managed app state with BLoC and GetX and integrated Google Maps live tracking, reducing crashes by 20% and improving overall stability.

TECHNICAL SKILLS

Languages: Dart, Kotlin, Swift, Java, C++, JavaScript, TypeScript, Python, SQL

Frameworks & State Management: Flutter, React Native, BLoC / Cubit, GetX

Architecture & Practices: Clean Architecture, MVVM, MVC, SOLID, OOP, Dependency Injection (GetIt, Injectable), TDD, Unit & Widget Testing, Code Review, Agile / Scrum, AI-Assisted Development

APIs, Backend & Storage: RESTful APIs, Dio, Retrofit, WebSockets, OAuth2 / JWT, Firebase (FCM, Crashlytics, Analytics, Firestore, Auth), SQLite, Hive, ObjectBox, Isar

Security & DevOps: Biometric Authentication, Certificate Pinning, AES / RSA Encryption, Secure Storage, Git, Shorebird OTA, CI/CD Pipelines

Mobile & Tools: Google Maps & Geolocation, NFC, QR Scanning, HLS Video/Audio Streaming, Localization & RTL (Arabic/English), Responsive Design, Performance Optimization, App Store & Play Store Deployment, Android Studio, Xcode, Figma

PROJECTS

QuickSale Mar 2025 – Present

- Built a product-marketplace app supporting rich ad postings (images, video, categories, pricing, geolocation) with account-to-store conversion, in-app text and voice chat, and social sharing — attracting 300+ listings within the launch month.

Goalatho Dec 2025 – Apr 2026

- Built paired consumer and business Flutter apps for a sports-venue booking platform with a shared modular architecture — end-to-end booking (search, slot availability, status tracking, cancellation), Google Maps venue discovery, FCM push with deep-link navigation, secure JWT storage, and a bilingual (English/Arabic) UI.

TruckLink Oct 2024 – Oct 2025

- Built a logistics marketplace with shipment posting, real-time Google Maps tracking, carrier verification, offer management, and trip/revenue tracking; delivered driver workflows (live tracking, order updates, invoicing) and an admin dashboard for approvals and analytics.

Lights Out Oct 2023 – Mar 2024

- Built a Flutter puzzle game modeling gameplay as state-space search; implemented six search algorithms (BFS, DFS, UCS, A*, Hill Climbing) with admissible heuristics, step-by-step solution playback, and complexity metrics, using GetX for reactive state and clean model/controller/view separation.

EDUCATION

Damascus University — Faculty of Information Technology Engineering Oct 2020 – Oct 2025

Bachelor of Software Engineering (GPA: 78.69%)

CERTIFICATIONS

- **CS50x — Harvard University:** Computer science fundamentals covering algorithms, data structures, and web development with C, Python, SQL, and JavaScript.
- **Deep Dive into Clean Architecture in Flutter — Udemy:** Structuring Flutter apps with scalable, testable, and maintainable Clean Architecture principles.
- **Flutter Advanced Course: BLoC and MVVM Pattern — Udemy:** Managing Flutter app state with the BLoC pattern using Cubits and Blocs — state handling, UI integration, and communication between multiple blocs.
